完结日期： 2003 年

经费：

风景建筑: \$1,200,000

面积： 25 亩

主要顾问：

Chamorro Design Group

Description

This centerpiece of this Bio-Technology complex is this dramatic fountain set within the central plaza. Slices taken from a granite sphere abstract the science of gene splicing.

Water jets and uplights playfully dance between the granite pieces. The water basin is located underneath the pavers, allowing people direct interaction with the fountain.

During times of inclement weather or drought concerns, the granite pieces alone create a vibrant, interactive and playful focal point.

描述

这个生物化学研究所是由一组有力的喷泉组成。被切割了的花岗石球体代表了基因分解的科学。喷泉射口和向上直射灯跃动于花岗石之中。水池埋在铺设底下，以便于人们直接接触花岗石喷泉。当天气严酷，干旱，下雨或缺水时，花岗石雕塑本身创造了有一个活跃的，互相作用的集中点。
