Description

This project is a renovation of an existing residential care facility and an addition of a skilled nursing facility. The existing residential care units required a new entrance design with a sitting area in front. In the rear, a new swimming pool, trellis, tables and chairs, and training rooms were added. The new skilled nursing facility is built around an enclosed courtyard which features a metal trellis covered with wisteria, creating a shady outdoor room. Railings were installed to help residents walk through the courtyard.
